2012 AMMUNITION CATALOG

NEW FOR 2012

CATALOG
2012

At CCI®, we always think it's worth taking a closer look. Paying attention to every little detail is just one of the ways we've become The Leader in Rimfire Ammunition®. No matter what type of shooting or hunting you're doing, we have a special load, bullet or payload that is your best option.

This year, we're excited to introduce a new ultra-quiet plinking round for .22 LR rifles. Quiet-22™ generates 75-percent less perceived noise of standard velocity .22 LR rounds. It's perfect for areas where noise may be a problem and ideal for introducing youth to the shooting sports.

As always, CCI brings you the finest, most advanced and diverse lineup of rimfire products available. Thanks for shooting CCI.

VARMINT
AMMUNITION

The evidence is in the lineup. One look is all it takes to know that CCI® understands what varmint hunters desire. Our Varmint Ammunition line features a variety of bullet technologies that are designed for the same goal: total devastation on impact.

Our V-Max, TNT® and TNT Green® offerings are designed for explosive expansion, while products like Mini-Mag® and Maxi Mag® offer controlled expansion and excellent energy transfer. And then there's the Segmented Hollow-Point. On impact this projectile breaks into three parts: each one forming its own wound channel. These top-of-the-line bullets are also very accurate, so small targets aren't a problem. If you can't find your ideal varmint load on this page, you better take a closer look.

V-MAX
- Flat-shooting
- Accurate
- Explosive expansion

STINGER®
- Hypervelocity leader
- Loaded within industry standard pressures
- Anchors varmints fast

MAXI MAG®
- Clean-burning propellants
- Maximum velocities
- Maximum energy transfer on impact

MINI-MAG®
- Original CCI® offering, still the most popular
- Reliable feeding
- Great penetration

SHORT HOLLOW-POINT
- A CCI® exclusive
- Great stopping power
- Reliable expansion

TNT®
- Explosive on impact
- Minimal mid-range rise
- Nearly identical point of aim to V-Max in 17 HMR

» A CLOSER LOOK «
SEGMENTED HOLLOW-POINT
The Segmented Hollow-Point and its unique design gives varmint hunters excellent performance. As you see here, this bullet breaks up into three parts on impact. Each one acts like its own projectile and creates a distinct wound channel to bring your target down hard. This bullet is ideal when you want maximum damage on impact.
22 LR Segmented HP, 6" penetration, 10-grains retained weight per segment.

SEGMENTED HOLLOW-POINT
- Impressive terminal effect
- Bullet breaks into three-parts on impact
- Each segment creates its own wound channel

TNT GREEN®
- Lead-free bullet
- Explosive terminal performance
- Match-grade accuracy

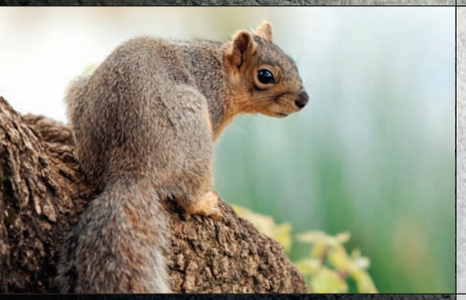
** To avoid serious injury do not use in semi-automatic firearms without consulting with your firearms manufacturer; use only in modern firearms in good condition marked for 17 HMR cartridges. ** To avoid serious injury from a ruptured cartridge, 17 Mach 2 ammunition should only be used in firearms with components specifically designed to safely fire 17 Mach 2 ammunition, including the firearm's action components (bolt/firing mechanism). Do not use this ammunition in firearms that have been modified unless ALL the action components have been specifically designed and verified by the firearm manufacturer as intended for 17 Mach 2. *** Use only in firearms having standard ANSI sporting barrel/chamber dimensions.*

SMALL GAME
AMMUNITION



When small animals are harvested for their hide or the kitchen table, clean holes and minimal meat damage is important. CCI® understands the needs of pelt and meat hunters, and has designed the Small Game Ammunition line with them in mind.

These targets are already small enough, so keeping hide damage or meat spoilage to a minimum is very important. Velocitor® is a tough bullet that gets great penetration without unneeded collateral damage. Another unique offering from CCI is the Small Game Bullet (SGB). This provides more stopping power than round nose bullets, but won't cause the damage associated with some hollow-points. And in outlying urban areas or where noise is an issue, look to the effective Sub-Sonic 22 LR offering. It gets reliable expansion and good performance on small game without significant noise.

VELOCITOR® HP

- Excellent weight retention
- Impressive downrange energy
- Deep penetration

SMALL GAME BULLET

- Better stopping power than round nose bullets
- Flat nose creates cylindrical wound channel
- Less meat spoilage

FMJ

- Punches clean holes
- 17 HMR option is CCI® exclusive
- Very accurate

» A CLOSER LOOK «
17 HMR GAMEPOINT®
The GamePoint® bullet is designed like many leading big game bullets—its controlled expansion will stop game in its tracks without ruining the parts of the animal you're after. When you intend to keep your animal, this bullet is the right choice.
.172–20gr. GAMEPOINT
17 HMR GamePoint®, 8.5" penetration, 19-grains retained weight.

GAMEPOINT®

- "Dimple-Tip" expands like a big game bullet
- Minimal meat and hide damage
- Accurate, powerful

SUB-SONIC HP

- Low noise
- Bullet expands without fragmenting
- Great performance on small game

COMPETITION
TARGET & PLINKING

For some, rimfire rifles mean casual shooting and plinking at the range or in the backyard. For others they mean the most intense competition there is. CCI's Competition, Target and Plinking line offers loads ideal for each discipline.

New for 2012, we've set your 22-caliber LR rifles to stealth mode with the new CCI® Quiet-22™ rimfire round. This ultra-quiet plinking load is ideal for bolt-action and single shot .22 LR rifles (and perfectly safe in semi-automatics).

When you're on the competition line, every shot, trigger pull or windage adjustment gets a closer look. Accurate and consistent ammunition is the only option here. For the backyard plinker, a consistent and affordable product is what matters most. CCI carries the ideal loads for these shooters. Our target and plinking offerings are optimized to hit any target you're after.

22 SHORT

- High velocity
- Copper-plated for clean bores
- Great accuracy, performance

GREEN TAG®

- Ultimate in accuracy
- Suitable for rifles or pistols
- Designed exclusively for competition

MINI-MAG®

- Original CCI® offering, still the most popular
- Reliable feeding
- Clean-burning powder won't foul barrel

STANDARD VELOCITY

- Affordable practice
- Same velocity as Green Tag®
- Consistent performance

MAXI MAG® TMJ®

- Consistent performance for plinking
- Utilizes sure-fire priming technology
- Jacket seamlessly encases lead core for accuracy

22 LONG

- A CCI® exclusive
- Only 22 Long available
- Very reliable

PISTOL MATCH

- Proven accuracy in handguns
- Precision components
- Top-of-the line functionality

SHORT TARGET

- Accurate and reliable to meet competition demands
- Specialized for IRF pistol competition
- Positive functioning without big recoil

SELECT™

- Outstanding performance in semi-automatics
- Impressive consistency
- Optimal velocity for accuracy

22 SHORT RANGE GREEN™

- Non-lead 22 LR plinking option
- Made of copper particle/polymer mix
- Reliable accuracy at 50 yards

22 AR TACTICAL

- Optimized for reliable function in AR-22 platforms
- Affordable, high volume shooting round
- Copper-plated target bullet offers superior accuracy

QUIET-22™ NEW!

- 75% reduction in perceived noise of standard velocity 22 LR
- Excellent accuracy
- Low velocity

» A CLOSER LOOK
SELECT™
Select™ gives a wide variety of shooters the accuracy they deserve. Semi-autos love this load, and its consistency is second to none. It's also loaded to ideal velocities for the best performance on the line.
22 LRSV/PM/GT
SELECT
22 LR Select, 5 shots at 50 yards, 0.635" group.

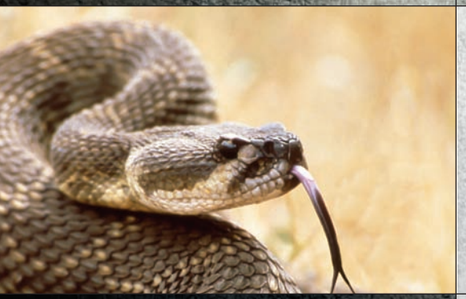
PEST CONTROL
/ SPECIALTY



When you take a closer look at the needs of shooters, you find that there are several unique options that make sense. Rimfire and centerfire pistol shotshells are perfect examples, and set us apart from everyone else. Pests can be hard-to-hit problems. Our shotshell options are excellent answers at short range. CCI® also has an industry exclusive in the Pest Control/Specialty line—22 WRF with a jacketed hollow-point bullet. This load combines a 19th century favorite with 21st century technology and is ideal for old barrels.

When pests present themselves a bit farther out, the CB Long's accuracy makes it an ideal choice. This caliber is also fun for plinking. CCI® knows that there are even times when no bullet at all is the best choice. Our Noise Blank can be used in any gun chambered for 22 Short, Long, or Long Rifle.

RIMFIRE SHOTSHELL

- Consistent patterns
- Easier hits on pests
- Only 22 WMR shotshell load on the market

« A CLOSER LOOK »
HANDGUN SHOTSHELL
Centerfire Handgun Shotshells are ideal for close-range pests. They give shooters a big advantage over a single-projectile. They're available in all the common handgun calibers and make perfect sense when pests or varmints are causing problems.
38/357 CAPSULE
44 Magnum/Spl Shotshell, 3.5" penetration, 140 pellet payload.

22 WRF JACKETED HOLLOW-POINT

- 19th Century favorite with 21st Century technology
- Only 22 WRF JHP in the industry
- Copper composition and special base make it ideal for old barrels

CB

- More effective at longer ranges on pests
- Accurate
- Great plinking loads

CENTERFIRE HANDGUN SHOTSHELL

- Great for close-range pest control
- Packed in reusable boxes of ten shotshells
- Available in a variety of calibers

NOISE BLANKS

- Great for training
- Clean-burning propellant
- Work in any firearm chambered for 22 Short, Long or Long Rifle

PEST CONTROL (CENTERFIRE SHOTSHELL)

*Cylinder lock up may occur in light weight revolvers due to capsule movement resulting from recoil inertia. *These cartridges are loaded with a lighter projectile than conventional 9mm Luger ammunition for use in pistols and revolvers. They may not function reliably in all models of firearms. ** May not function properly in rifles. *** These cartridges are designed to function in semi-automatic pistols. DO NOT USE IN REVOLVERS – cylinder lock-up may occur.*

DO NOT USE SHOTSHELLS IN FIREARMS WITH PORTED BARRELS OR PORTED RECOIL COMPENSATORS. DO NOT RELOAD THESE CARTRIDGE CASES. These cases are marked NR (Not Reloadable). Rupture of reloaded cases can cause severe injury. Intended for short-range pest control; not recommended for self-defense. † Not for revolvers. Most 22 WRF revolvers have undersized bores that cannot use a jacketed bullet. Performance data derived from industry test barrels; provided for reference. Velocities from production firearms may vary. Specifications subject to change without notice.

RIMFIRE
TIPS FOR SUCCESS

» SAFETY FIRST WHEN SHOOTING!
Always wear eye and ear protection. Rimfire bullets can travel up to two miles. Treat every rimfire firearm with the same respect you afford your most powerful rifle or handgun.

» MATCH YOUR AMMUNITION TO THE SPORT.
Choose solid lead or TMJ® bullets for edible game, hollow points for varmints and lead round nose for competition shoots. See the rimfire reference table for usage recommendations.

» SIGHT IN MOST HUNTING RIFLES FOR 50 YARDS.
The bullet rise between the muzzle and 50 yards is very small, so you can use the same sight picture over that range. For open-country varmint shooting, consider a 75 yard sight-in for 22 Long Rifle, and a 100 yard sight-in for the Magnum rimfires.

» CLEAN THAT GUN!
Most rimfire malfunctions can be traced to poor gun maintenance. When you clean the bore, also clean the action. Excess residue or lubricant in the action can cause misfires and feeding problems.

» GUN CONDITION IS EVERYTHING!
There are many poor quality or badly worn 22-caliber rimfire firearms in circulation that should have been rebuilt or retired years ago. Shooting them with ANY ammunition could be hazardous. When in doubt, consult the firearm's manufacturer or a competent gunsmith.

» REVOLVERS HAVE BARREL/CYLINDER GAPS.
The industry MAXIMUM permissible gap is a mere 0.012 inch—that's just three sheets of standard copier paper. A gap larger than this can mean a bullet fails to leave the barrel, resulting in a hazardous barrel obstruction. Revolvers with oversized gaps must not be fired with ANY ammunition until repaired.

» TRY DIFFERENT TYPES OF AMMUNITION WHEN LOOKING FOR ACCURACY.
There are many makes of rimfire firearms with a wide variety of rifling patterns. That makes them very sensitive to the ammunition type. CCI® has plenty of choices to help you in that quest.

» TAKE CARE OF YOUR AMMUNITION.
Store away from moisture, heat, and oils. Keep ammunition in the original boxes. CCI's innovative plastic box protects ammunition better than the cardboard boxes other companies use.

» A CLOSER LOOK →
RIMFIRE CONSTRUCTION
Clean-burning powder delivers optimum velocity while maintaining consistent chamber pressures
Copper-plated bullet reduces fouling and enhances accuracy
Clean-burning priming mixture ensures uniform and reliable ignition
Cases are crimped to secure bullet—allowing for consistent pressures and velocities
Super-hard bullet lube is applied to all CCI® rimfire to further eliminate fouling
Rimfire cartridge illustration shown here is the 22 Long Rifle Mini-Mag®, part number 0030.

*CB = "conical ball" reduced powerloise; PP = flat point; CP = copper-plated; L = lead; J = jacketed; HP = hollow-point; RF = Rimfire; RN = round nose; SHP = segmented hollow-point; SP = soft point; TMJ = encapsulated full metal jacket. †—not for revolvers. Most 22 WRF revolvers have undersized bores that cannot use a jacketed bullet. Performance data derived from industry test barrels; provided for reference. Velocities from production firearms may vary. Specifications subject to change without notice. § Trajectory—bullet path based on 1.5 inches sight height. ** Do not use 17 HMR ammunition in semi-automatic firearms without first contacting your gun manufacturer. *** Use 22 LR Short Range Green in ANSI Sporting Chambers only— DO NOT USE IN MATCH CHAMBERS. May not function in all semi-automatic firearms. May not function in all semi-automatic firearms, however manual cycling of the action may be required.*

PRIMERS

Primers are the key to everything we shoot. Whether we're hunting with our own special handloads, or plinking with factory ammunition, primer performance is important. At CCI® we pride ourselves on primer-quality. As Eric Grauffel can attest, we make the most consistent, reliable primers. And we've got a primer for everyone.

Our Standard Rifle and Pistol primers meet the majority of reloading needs and are clean-burning. This means primer pockets stay clear and there's no question on performance. For those trying to get the most accuracy out of their loads, we offer Bench Rest Rifle Primers. These primers help skilled shooters get the tightest groups.

Look for many of our other high-quality primer offerings on the next page.

209 IN-LINE MUZZLELOADING PRIMERS

- Optimized for muzzleloading
- Reduce fouling
- Formulated to ignite in humid conditions

STANDARD RIFLE/PISTOL PRIMERS

- Clean-burning
- Meet majority of reloading needs
- Unprecedented reliability

BENCH REST RIFLE PRIMERS

- Precision ignition for tough competition
- Assembled with extra-care for consistency
- Ultimate in accuracy

MAGNUM RIFLE/ PISTOL PRIMERS

- Provide extra heat and ignition power
- 20% hotter flame to light propellants in toughest hunting conditions
- No loss in sensitivity

SHOTSHELL PRIMERS

- 209 is designed for standard field and target loads
- Reliable, clean-burning
- Fit all modern shotshell cases with 209 primer pocket
- 209M is a true magnum shotshell primer for heavy waterfowl and turkey loads

PRIMERS IN APS STRIPS

- Available for most popular primers
- Speeds up reloading process
- Offers protection for primers

PERCUSSION CAPS

- Non-corrosive, non-mercuric priming compounds
- Choice of styles
- Assembled with soft, ribbed copper cups

FOUR WING MUSKET CAPS

- Tough four wing design
- Lighter explosive charge
- Designed especially for reenactment

ERIC GRAUFFEL
5-TIME WORLD IPSC CHAMPION

Eric has won hundreds of competitions — ALL with CCI®.

CCI's shooting expert, Eric Grauffel, is known for having an unprecedented winning streak. He hasn't lost a competition in more than 11 years. The 31-year-old native of France has won more than 180 President Medals and is World Champion of the International Practical Shooting Confederation (IPSC). For his competitive shooting, Grauffel uses only CCI® small pistol primers in his hand-loaded ammunition. With CCI primers Grauffel says he gets the most reliability, efficiency and accuracy out of his bullets. "If a primer is not perfect, it is like killing yourself in competition," said Grauffel. As World IPSC champion, he requires the ultimate in accuracy, quality and selection. Working and playing in some of the world's finest shooting venues, Grauffel knows quality. That's why he picks CCI every time. Follow Grauffel's progress or find out more about CCI's Competition, Target and Plinking line. Visit www.cci-ammunition.com.
